Project Documentation

1. Introduction

Project Title: Smart Library Request Workflow in ServiceNow
Team Members:

- Member 1 – Developer
- Member 2 – Workflow Designer
- Member 3 – Testing
- Member 4 – Documentation
- Member 5- voiceover

2. Project Overview

Purpose: The purpose of this project is to automate the traditional library system using ServiceNow. It helps students request books online and allows librarians to manage approvals efficiently through a digital workflow.

Features:

- Online book request system
- Role-based access (Student & Librarian)
- Automated approval workflow using Flow Designer
- Real-time book status updates (Available, Issued, Returned)
- Email notifications
- Reports such as Most Borrowed Books

3. Architecture

Service Portal / UI:

- Forms for book request submission
- User-friendly interface for students and librarians
- UI Policies to control form behavior
- Dynamic field visibility and validation

ServiceNow Platform:

- Business logic implemented using Flow Designer
- Automation for approval and status updates
- Role-based access using ACLs
- Server-side scripting (if required)

ServiceNow Tables:

Custom Tables:

- **Book Table**
  - Book Name
  - Author
  - Status (Available/Issued)
- **Borrow Request Table**
  - Student Name
  - Book Reference
  - Request Status
  - Approval Status

4. Setup Instructions

Prerequisites:

- ServiceNow Developer Instance
- Basic knowledge of ServiceNow platform

Installation:

- Create custom tables (Book, Borrow Request)
- Define roles (Student, Librarian)
- Configure forms and fields
- Apply UI Policies
- Create Flow Designer workflow
- Configure ACLs for security
- Create reports and dashboards

5. ServiceNow Modules

- Tables (Book, Borrow Request)
- Forms & Views
- Flow Designer
- UI Policies
- Access Control Rules (ACLs)
- Reports & Dashboards

.

6. Running the Application

- Login to ServiceNow instance
- Navigate to Service Portal / Application
- Submit book request
- Librarian approves/rejects request
- System updates status automatically

.

7. Workflow Documentation

Book Request Process

- Student logs in
- Selects available book
- Submits request
- Librarian reviews request
- Approval/Rejection
- Book status updated automatically

8. Authentication

 Role-based access control

 Roles:

- Student → Can request books
- Librarian → Can approve/reject requests

 ACLs ensure:

- Only authorized users access data
- Data security and integrity maintained

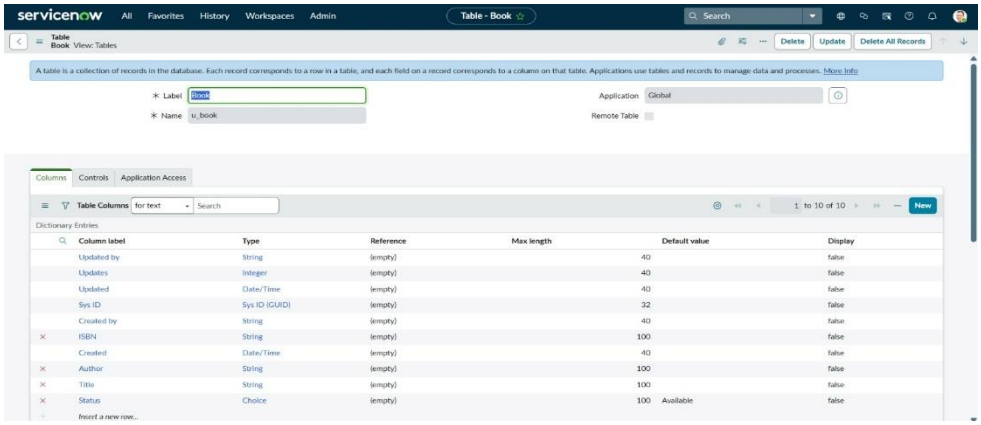
9. User Interface

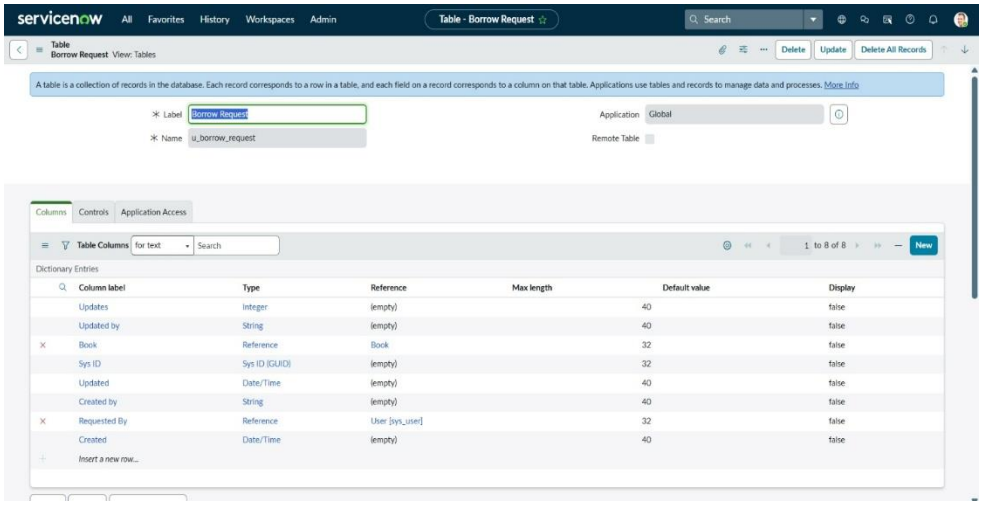
- Book Request Form
- Librarian Approval Form
- Book Status View
- Reports Dashboard

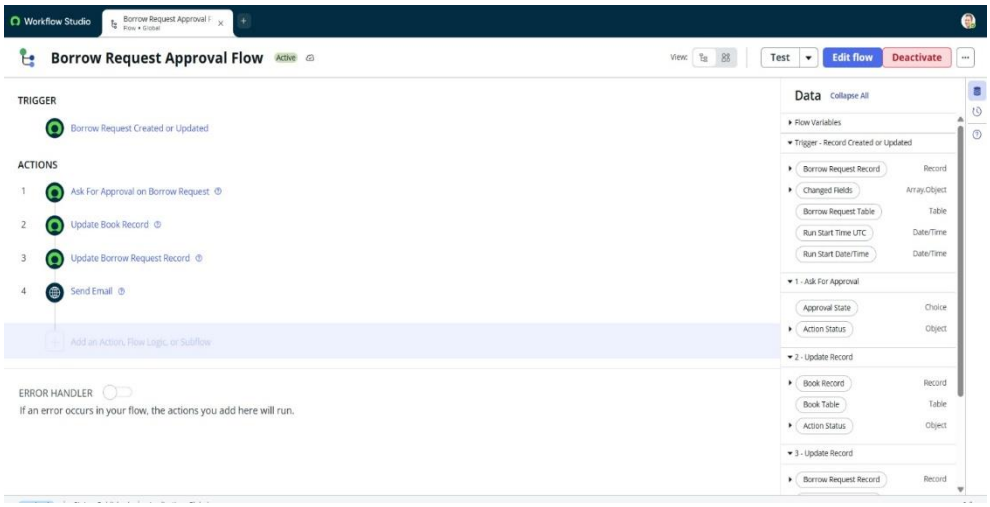
10. Testing

- Tested request submission
- Verified approval workflow
- Checked book status updates
- Ensured role-based access works correctly

11. Screenshots or Demo







12. Known Issues

- Requires internet access
- Limited customization in free instance
- Initial learning curve for ServiceNow

13. Future Enhancements

- Mobile app integration
- AI-based book recommendation
- RFID integration
- Advanced analytics dashboard.
